Methodology : Viral RNA was extracted from the sample supernatant using HiPurA Viral RNA Purification kit, HiMedia according to the manufacturer's instructions. RT-PCR was performed by GENES2ME VIRALDETECT-II Multiplex Real time PCR Kit according to the manufacturer's guidelines on BIO-RAD CFX96 platform.

- Disclaimer:**
1. Reports generated are from the supplied sample only and should be correlated with clinical findings.
 2. Testing of referred clinical specimens were considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP) / any other health care facility affirming requirements of the case definition/s.
 3. A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.
 4. Repeat sample and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimen must be considered after a gap of 2-4 days after the collection of the first specimen for additional testing if required.
 5. Please note that these results are not to be used for any thesis or presentations or for publication in any journal without the prior permission of the Director General, ICMR.
 6. Please ensure and maintain the confidentiality of the test report.
